Project :Create a Tableau Story
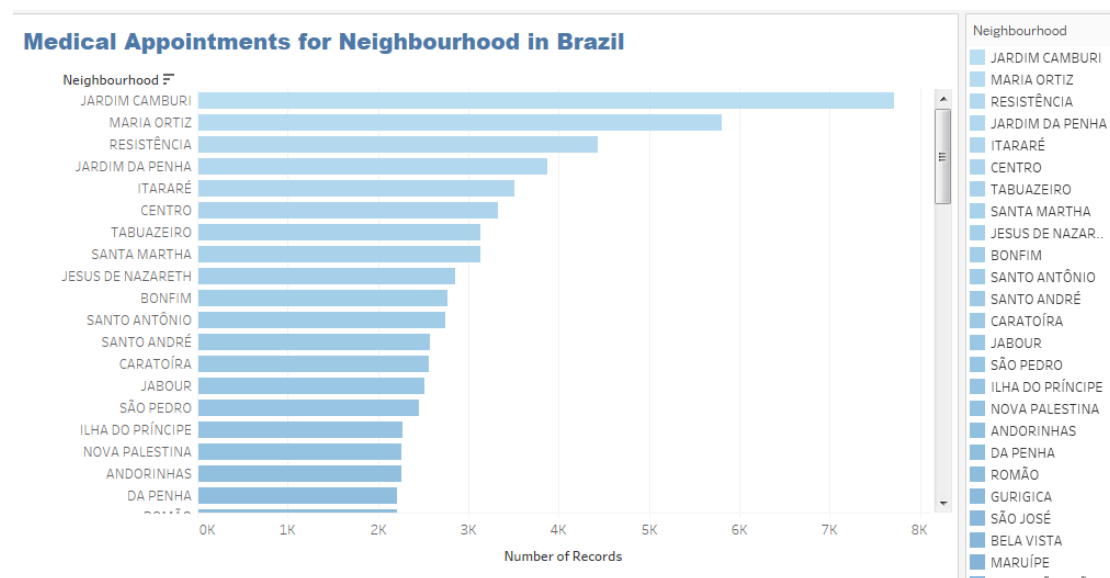

By Rasha AL-Amoud

Summary

In this project I have used different visualization techniques to communicate insight on no show medical appointments data set , I have analyzed relationship between variables such as Gender , Neighbourhood , Month of Appointment Day for 2016 and No-show.

Design

For the first insight ,I used bar chart to see the top Medical Appointments for Neighbourhood in Brazil. Then I used a line chart to know which month has most patient visited medical appointment. After that I used bar chart to see which gender has the most patients for medical appointments .Finally , I used pie chart to know no-show SMS recipients by patients

Initial Version

The first analysis , number of record by neighbourhood , I choose a bar chart to easily describe the observations

Final Version

The final version, I used a line chart to know which month has most patient visited medical appointment, I used bar chart to see which gender has the most patients for medical appointments, and I used pie chart to know no-show SMS recipients by patients

Feedback

You have clearly put a lot of effort into this and demonstrated your understanding of best practices.
